

Applicant Data Exploratory Data Analysis (EDA) Insights Report

Key Findings

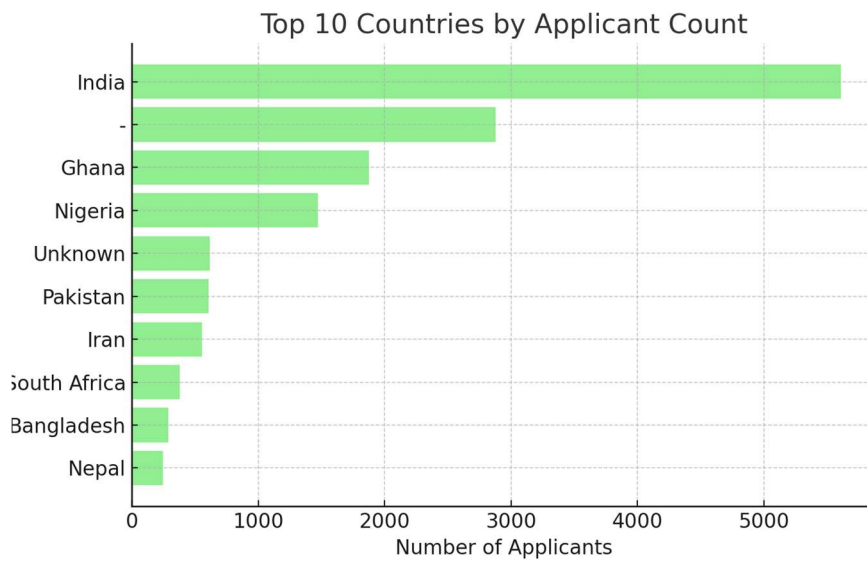

- 1. High Volume of Duplicate Applicant IDs:** Out of 17,124 rows, only 15,115 unique App_IDs exist. That means 2,009 records are duplicates ($\approx 12\%$). This suggests multiple entries per applicant due to multiple phone numbers or resubmissions.
- 2. Country Distribution Skew:** India dominates with 5,609 applicants ($\sim 33\%$). Other top countries include Ghana (1,876), Nigeria (1,473), Pakistan (607), and Iran (554). However, 2,880 records are marked as “-” and 618 as “Unknown,” showing missing/incomplete country data.
- 3. Single-University Dataset:** All 17,124 records belong to Illinois Institute of Technology. This limits cross-university comparisons but allows deep-dive analysis for IIT.
- 4. Severe Missingness in Email:** 96% of applicants (16,500+) lack email addresses. This reduces the dataset’s usability for outreach or follow-up communication.
