

Outreach Data Insights & Opportunities Report

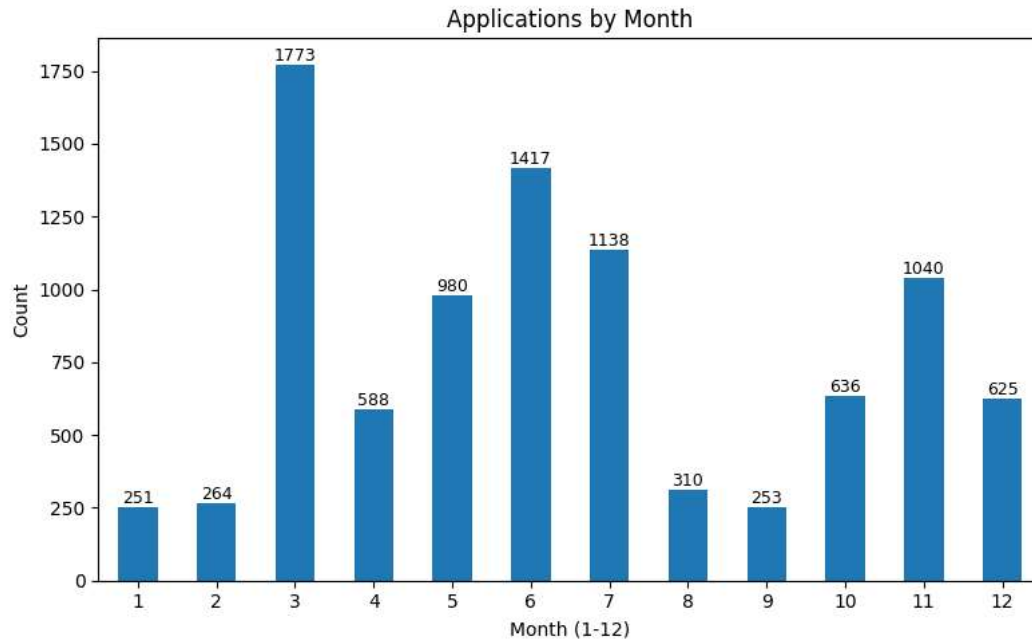

Key Findings

- 1. Duplicate Reference_IDs: 26.7% of Reference_IDs are duplicated, suggesting repeated outreach attempts or data-entry errors.
- 2. Seasonality: Applications peak in March (1,773) and June (1,417), with lowest activity in September (253).
- 3. Top Campaign Performance: FA24IP and FA24SIC campaigns dominate, accounting for nearly half of all applications.

Segment-level & Timing-based Opportunities

Opportunity	Notes
Seasonal Peaks	March and June are strong months. Prioritize campaigns during these times to maximize engagement.
Troughs in August–September	Low activity periods can be used for re-engagement or experimentation with new strategies.
Steady Baseline (Oct–Dec)	Maintain momentum with consistent outreach rather than expecting spikes.
Top Campaigns Dominate	FA24IP and FA24SIC drive - 47% of applications. Replicate their strategies in weaker campaigns.
Long Tail of Small Campaigns	Review low-volume campaigns (e.g., SP25DSP, DANE24) to decide whether to optimize or retire them.
Diversification	Avoid over-reliance on FA24 campaigns; strengthen mid-tier campaigns like IANF23 or SP25IP.
